

Instructions for Installing a Letterbox Brush

Controlled ventilation helps reduce condensation and damp by letting fresh air in when needed. However, draughts are uncontrolled - they let in too much cold air and waste too much heat.

To draught-proof your home you should block up unnecessary gaps that let cold air in and warm air out. Installing a letterbox brush means you'll use less energy to heat your home, so you'll save money as well as making your home snug and pleasant.

.....

1. Hold the letterbox brush to the door and line it up so that it covers the letterbox opening.
2. With a bradawl, mark the holes at each fixing point.
3. Use the screws provided to fix the letterbox brush to the door.

Tools required:

**Bradawl
Screwdriver**

Please note: If you experience any difficulty fitting this product, please call our dedicated Installation Helpline on **0800 029 4549** to speak to an energy advisor who will give further guidance and assistance over the telephone* This service is open weekdays 8.45am to 5.30pm.
